Climate - CO2 - Nature's Gift

Price: £14.99

Short Description

‘Climate Change’ dogma took hold through gross distortions of science for political ends.

Description

The entire base and fabric of the IPCC dangerous warming dogma rests upon the colossal falsehood that rising atmospheric CO2 since 1890 has created a trap for heat from the Earth’s surface which is accumulating to such an extent as to threaten humanity’s very existence. This book demonstrates that such claim is without any foundation in physics and chemistry. It describes how doubling CO2 will have no noticeable effect on the temperature of the Earth. It explains how CO2 is the key to mankind’s very existence, welfare and prosperity.
